

Columns Checklist

Use Generic or Unit Sheets for Columns

- Select the Column Cap Style
(Corinthian, Temple of the Winds, Ionic, Tuscan, Doric, Verona)
- Select the desired Primary Column View (Entasis, Straight or Tapered)
- Select the desired Modifying Column Feel (Smooth or Fluted)
- Select the Modifying Column details (Hollow or Solid)
- Verify the Unit Size (X Height, Y Length, Z Width)
- Calculate quantities of each surround (organized by basic shape and control dimensions)
- Select stone color

Secondary Considerations

The following list of questions will help to identify situations that are not typical, but possibly critical.

- How close together will Column spacing be?
 - Will this be installed as a load bearing architectural feature?
 - Structure that the columns are going to be installed for?
 - Additional Cornice, Entablature, Lintels or other surrounds that might require interfacing review?
 - Did you know that the Column height already includes the $\frac{3}{4}$ inch mortar joints in the Y dimension?
-
